- 1) Goal is for Cars to drive in their lanes
- 2) Edit your drive method so that it recycle's the Car object to the same lane
- 3) The lane start locations should be calculated in terms of the height of the Car and height of the happyFace
- 4) Randomly select the lane for each Car when constructing each Car in the Car array
- 5) Test it and make sure Cars stay in their lanes for all lanes
