

New – Add to Class  
toString() method

Mr. Neat  
Java

# What If....

- you have an object that has been constructed and
- you SOP'ed it. What happens?

```
Car a = new Car(4,5);  
System.out.println(a);
```

What Would You Like to See When  
You SOP Your object?

# Let's Add a toString() Method to your Class

```
public String toString()
```

News flash: if a class has a toString method, it is called automatically when an object of that class is SOP'd!

# Lab

- Add a toString() method to your Car class.
- Make it descriptive
- Test it by making multiple Car objects and SOP'ing each one
