New – ASCII Table – enter key

Mr. Neat
Java

Need to detect the "enter" key

- The user is done with their attempt to type the answer when they hit the *enter* key
- We need to know how to detect this
- The answer is derived from the ASCII Table (beyond the scope of this course, but really important to know)

the "enter" key

- The ASCII code is the numerical representation of a character
- Each character on the keyboard has a unique value (number)

ASCII Table

<u>De</u>	<u>:c H</u>	x Oct	Char		Dec	Нх	Oct	Html	Chr	Dec	Нх	Oct	Html	Chr	Dec	Hx	Oct	Html CI	hr
1	0 0	000	NUL	(null)	32	20	040	@#32;	Space	64	40	100	 4 ;	0	96	60	140	`	*

enter key

Source: www.LookupTables.com

Detecting the "enter" key

```
public void keyPress(String s)
{
    char done = (char)10;
    String temp = Character.toString(done);
    String representation
    of the enter key
```

Lab

- Your program should display each keystroke from the user horizontally on the canvas
- You can decide the spacing
- When the user hits the enter key, their total typing attempt should be printed to the command window
